

Tutorial 1

Introduction to Software Engineering

Learning Outcomes:

- Explain what software engineering entails.
- Describe the importance of software engineering
- Discuss the ethical issues and considerations in software engineering

Note:

- Please do all the exercises in this tutorial in classroom
- Students should sit with the teammates of associated project groups

Session 1: Quiz [20 minutes]

1. What is software engineering?
2. Why is testing important in software engineering?
3. Why is software engineering essential in the development of computer systems?
4. How does software engineering contribute to advancements in technology and society?

Session 2: Group Project Discussion [30 minutes]

Activity1: Discussion on Ethical Issues in Software Engineering (Work together!) [15 minutes]

CASE: Imagine you are a software engineer working on a new app. Your boss asks you to add a feature that secretly collects personal information from users without telling them. This information will be sold to other companies to make money.

1. Do you think it's okay to collect people's information without asking them?
2. How might this decision affect the people using the app?
3. What would be the right thing to do?

Activity2: Discussion on group project related to Learning outcomes (Work together!) [15 minutes]

1. If student has no group yet, please find yourself a group during this activity. If you have a group, please continue with the next question.
2. When your team is working on the group project, how important it is to apply software engineering?
3. Discuss the ethical issues and considerations in working on the group project.
